Available immediately | Open to GCC relocation

PROFESSIONAL SUMMARY

Software engineer with **C#/.NET** and **SQL Server** production experience in **ERP** development and **GCC** client implementation. Independently built a reusable migration utility that moved transaction data during the company's first GCC client onboarding. Also built an ASP.NET Core/React platform and integrated language models with voice agents.

PROFESSIONAL EXPERIENCE

Junior Software Developer | Logiology Solutions (Jewellery ERP Software) | Oct 2025 – Aug 2026

- Built a reusable **C#/.NET migration application** for the company's first GCC customer onboarding, processing **130K+ vouchers** across 13 branches and a head office while reducing manual migration work.
- Gathered requirements and assessed feasibility with client staff; supported go-live, trained users, troubleshot customer issues and documented fixes.
- Mapped undocumented source data across **17+ ERP modules**; implemented validation, failure logging, selective retries and reconciliation against business reports.
- Developed and supported WPF/.NET ERP workflows for sales, inventory, accounting, reporting and import/export in products used by **500+ clients** across 1,000+ active showrooms in 8+ countries.
- Investigated production stock and calculation defects with **SQL queries** and business-rule analysis; applied live data fixes and replaced eager loading across 14 paths with on-demand retrieval.

Recognition: Best Developer of the Month, May 2026 (company-wide).

AI/ML Trainee | HeveaHill Technologies | Aug 2025 – Sep 2025

- Integrated **Hugging Face** language models with **Retell AI** voice agents for healthcare appointment booking; tested responses across call scenarios.

PROJECTS

Pursuit — Multi-Tenant Recruitment Platform | github.com/adheebabdulla007/pursuit | 2026

- Built **ASP.NET Core** APIs and **React/TypeScript** interfaces for three roles (Employer, JobSeeker, Admin) covering job posting, search, applications, resume upload to Azure Blob Storage and user administration.
- Isolated employer tenants with **EF Core global query filters** and service-layer ownership checks; secured sessions with HttpOnly JWT cookies and rotating SQL-backed refresh tokens that revoke all of an account's tokens on reuse or admin deactivation.
- Cached paginated job search in **Redis** with invalidation on job changes and SQL Server fallback; saved each application and its event in one SQL transaction (outbox pattern), with a background worker retrying **RabbitMQ** publication.
- Wrote **122 backend** and **83 frontend tests** plus Playwright tests on Chromium, Firefox, WebKit and mobile Chromium; GitHub Actions runs backend, SQL migration, frontend and browser-test jobs.

TECHNICAL SKILLS

Backend & Desktop: C#, .NET Framework, WPF, ASP.NET Core Web API, EF Core, REST APIs, Python, Java

Data & Messaging: SQL Server, MySQL, T-SQL, Redis, RabbitMQ

Frontend: React, TypeScript, HTML, CSS

AI Integration: Hugging Face LLMs, Retell AI voice agents

Cloud & Delivery: Azure Blob Storage, Docker, Git, GitHub Actions

Testing: xUnit, Testcontainers, Playwright

EDUCATION

B.Tech, Information Technology | 2021 - 2025

College of Engineering Thalassery, APJ Abdul Kalam Technological University

Languages: English (fluent); Malayalam (native); Hindi (intermediate); Arabic (reading and writing)
