EXPERIENCE

Junior Software Developer | Logiology Solutions

Oct 2025 - Aug 2026

- Independently built a C#/.NET application that migrated **130K+ vouchers** across 14 locations in under one month, preserving eight months of transaction history for the company's first GCC client.
- Reverse-engineered undocumented source databases and mapped sales, purchase, inventory, scheme, and accounting data into ERP workflows, preserving historical transactions previously unavailable after onboarding.
- Implemented data validation, failure logging, and selective retries for failed vouchers; supported reconciliation of migrated stock, cash, bank, and transaction data against source-system reports.
- Replaced eager startup loading across **14 master-data paths** with identifier-based, on-demand database retrieval, eliminating unnecessary initialization queries.
- Developed transaction, reporting, and import/export features and resolved calculation and stock-validation defects in ERP products used across **500+ jewellery showrooms**.

Best Developer of the Month, May 2026

AI/ML Trainee | HeveaHill Technologies

Aug 2025 - Sep 2025

- Integrated Hugging Face LLMs with Retell AI voice agents for healthcare appointment booking and manually tested response accuracy across call scenarios.

PROJECTS

Pursuit | Multi-Tenant Recruitment Platform

Jun 2026 - Present

ASP.NET Core, React, TypeScript, SQL Server | github.com/adheebabdulla007/pursuit

- Built **REST APIs and React interfaces** for employer job posting, candidate search and resume submission, and administrator user management using EF Core, React Router, and TanStack Query.
- Implemented **tenant-scoped data access** with EF Core query filters and ownership checks; wrote integration tests for employer and candidate access boundaries using containerized SQL Server, Redis, and RabbitMQ.
- Added **Redis cache-aside** with invalidation and database fallback; replaced eager Redis/RabbitMQ connections with deferred initialization so the API could start during dependency outages.
- Implemented **refresh-token rotation and reuse detection**, with a React request wrapper that consolidates concurrent authentication failures into one refresh request; verified the flow in a browser.
- Wrote **47 frontend component tests** and a Playwright employer-to-candidate application journey exercised across Chromium, Firefox, and WebKit.

TECHNICAL SKILLS

Languages: C#, Python, Java, TypeScript, SQL, VB.NET

Backend & Data: ASP.NET Core, EF Core, SQL Server/T-SQL, Redis, RabbitMQ

Frontend & Desktop: HTML, CSS, React, WPF, .NET Framework, WCF, ADO.NET

Testing & Tools: xUnit, Testcontainers, Vitest, React Testing Library, Playwright, Docker, Git

EDUCATION

B.Tech in Information Technology

2021 - 2025

College of Engineering Thalassery, APJ Abdul Kalam Technological University
